

Motorola RAZR V3i Battery Replacement

The battery in your phone is the single most important component in the entire device and it is also the easiest to repair. Using this guide, you will be able to install a replacement battery for your Motorola RAZR V3i.

PARTS:

- [Replacement battery for Motorola V3i](#) (1)
-

Step 1 — Battery

- Make sure the phone is turned off by holding the red End Call/Power button down until the phone shuts off.
- ☑ If you have a case, it has to be removed.

Step 2

- Close the phone and find the battery cover button, located on the backside of the phone underneath the hinge.
- Using your finger, press down on the button to release the back cover. Then, lift the cover and remove it from the phone completely.
- ⓘ The flat edge of a credit card or other flat object will also work.

Step 3

- Remove the battery by pushing down on it from the top while gently pulling it outwards.

⚠ Be careful not use too much force as the battery retaining tab could be damaged.

Step 4

- Insert the replacement battery by gently pushing the bottom of the battery into the battery recess. Then, push the top in until the battery retaining tab clicks over it, holding it in place.

⚠ Be careful when inserting the battery under the retaining tab as it can break if too much force is applied.

Step 5

- Place the back cover back on the phone by inserting the bottom first followed by the top, and press down gently until it clicks into place.
- ★ We recommend to charge the phone for 24 hours before using it to properly initialize the new battery. This isn't required, but it will speed up the "break-in" period with the new battery.
